

MUHAMMAD RAKEH SALEEM *Ph.D.*

5744 NW 48th Dr, Coral Springs, FL 33067, USA

☎ (814)321-4441 ✉ rakeh.muhammad@gmail.com [in rakeh-saleem](https://www.linkedin.com/in/rakeh-saleem) [github rakehsaleem](https://github.com/rakehsaleem)

A highly driven **Data Scientist and Machine Learning Engineer** with a Ph.D. and over 5 years of experience in leading and implementing end-to-end ML solutions. Expertise includes the full model lifecycle: **data engineering, statistical modeling, optimization, deployment (MLOps), and systems development**. Proven track record in leveraging advanced techniques, including Deep Learning and Computer Vision, to translate complex data into scalable, high-impact business and operational solutions.

Software & Technical Skills

- **ML/GenAI:** Time Series Analysis, Transformers, Deep Learning, Scikit-learn, PyTorch, TensorFlow
- **Programming:** Python, C++, MATLAB, SQL, LaTeX
- **MLOps & Infrastructure:** MLflow, AWS, Snowflake, Data Pipelines, Model Deployment, Containerization, Cloud Platforms, Model Evaluation
- **Computer Vision:** Document Information Extraction, OCR, Object Detection, Image Classification, CNN
- **Software/Systems:** Data Structures, Algorithms, System Diagnosis, Embedded Systems
- **Tools/Platforms:** Power BI, Tableau, Git, Jupyter Notebook

Work Experience

Data Scientist

Dec 2024 – Present

GA Telesis – Digital Innovation Group

Fort Lauderdale, FL

- Built demand forecasting models using Transformers, LSTM, and XGBoost, successfully **delivering the initial MVP**.
- Engineered **automated time-series data pipelines** using Snowflake for large-scale ingestion, and managed model deployment and tracking via AWS SageMaker and MLflow, feeding insights into interactive Power BI dashboards.
- Developed **initial proof-of-concept** framework for Document AI, creating custom deep learning models (OCR, CNNs) via Vertex AI to **extract sensitive information from unstructured data**.

Graduate Researcher

Sep 2020 – Dec 2024

Pennsylvania State University – Built Environment Analytics and Modeling Lab

State College, USA

- Led a multi-year research agenda to build and deploy complex **computer vision and deep learning solutions**, demonstrating technical leadership and full-stack ML ownership.
- Developed and optimized CNN models for high-resolution image analysis, achieving **95% accuracy** in object detection while **reducing inference time by 40%** via model optimization and efficient serving layers.
- Designed and implemented **machine learning pipelines** for production use, leveraging user perception data (eye-tracking) to inform model training and novel evaluation techniques for human-AI systems.
- Developed algorithms for **visual search** and **image classification/processing** that translated human expert knowledge into quantifiable ML features for autonomous navigation systems.

Teaching Assistant

Sep 2021 – Aug 2023

Pennsylvania State University – EDSGN 100: Cornerstone Engineering Design

State College, USA

- Developed and delivered technical lectures and practical sessions on complex engineering and computational methods to undergraduate students.

Graduate Researcher

Sep 2018 – Aug 2020

Chung-Ang University – Smart Infrastructure and Technology Lab

Seoul, S. Korea

- Developed and deployed deep convolutional neural networks (**deep CNNs**) for real-time visual analysis, including a system for construction worker safety monitoring that **achieved a 25% improvement** in risk detection speed.
- Designed the end-to-end development of an integrated UAV imaging system, involving **hardware-software integration** and **image stitching algorithms** to render high-resolution data from 50 inspection flights.
- Focused on applied ML, implementing **CNN models on-device** to demonstrate a full-stack, embedded programming solution from data acquisition to intelligent analysis, a key skill for production systems.

Development Engineer – Smart Grid and Power Lab

Feb 2018 – May 2018

National University of Science and Technology (NUST)

Islamabad, Pakistan

- Led the design and development of an **end-to-end IoT system**, from embedded programming to software framework and cloud-based data visualization within a 3-month timeline.
- Engineered a wireless sensor system for fault identification and localization, implementing an embedded programming solution on a microcontroller that **achieved 97% data transmission reliability**.
- Built a proof-of-concept for a **real-time data analysis and visualization dashboard** on the ThingSpeak Cloud platform, showcasing experience with data pipelines and back-end systems, and UX layers.

Education

Pennsylvania State University

PhD in Engineering

Aug 2020 – Dec 2024

State College, USA

Chung-Ang University

Master in Engineering

Sept 2018 – Jun 2020

Seoul, S. Korea

Bahria University Islamabad

Bachelor in Electrical Engineering

Aug 2013 – Jun 2017

Islamabad, Pakistan

Invited Talks

- 2024 **Thornton Tomasetti**, “From gaze to insight: Leveraging eye tracking for SHM”
- 2023 **ETH Zurich**, “AI-enabled damage detection using eye tracking”
- 2020 **PennState**, “Digital twins and AI-enabled SHM”
- 2020 **PennState**, “Does more data lead to more answers or questions?”

Publications

- **M.R. Saleem** and R. Napolitano. Comparative Analysis of Saliency Map Algorithms in Capturing Visual Priorities for Building Inspections, **Journal of Building Engineering**, 97, 1106, 2024.
- **M.R. Saleem**, R. Mayne, and R. Napolitano. Evaluating Human Expert Knowledge In Damage Assessment Using Eye Tracking: A Disaster Case Study, **Buildings**, 14(7), 2114, 2024.
- **M.R. Saleem**, R. Mayne, and R. Napolitano. Analysis of gaze patterns during facade inspection to understand inspector sense-making processes. **Scientific Reports**, 13(1), 2929, 2023.
- N. Khan, **M.R. Saleem**, D. Lee, M.W. Park, and C. Park. Utilizing safety rule correlation for mobile scaffolds monitoring leveraging deep convolution neural networks. *Computers in Industry*, 129, 2021.
- **M.R. Saleem**, J.W. Park, J.H. Lee, H.J. Jung, and M.Z. Sarwar. Instant bridge visual inspection using an unmanned aerial vehicle by image capturing and geo-tagging system and deep convolutional neural network, **Structural Health Monitoring**, 20(4), 1760-1777, 2021.

Mentoring

- **Led the mentorship of 8 undergraduate and graduate students** on research projects spanning eye-tracking, image processing, and computer vision, resulting in multiple publications and conference presentations.
